

Water and Development Forum

Agua y desarrollo.

Water and Development Forum

In 2016, the [Engineering for Sustainable Development Forum](#) took place in Granada. The topics of sustainable development, climate change, renewable energies, water, sustainable mobility, social entrepreneurship and financing instruments for sustainability were analyzed and discussed.

The **Hidralia-UGR Chair** raises, on the occasion of its official presentation, a new Forum that will deal with one of the areas exposed last year: **Water and Development**.

In 2017, the First Water and Development Forum took place on November 10 at the School of Civil Engineering, with more than 300 attendees. There have been relevant speakers in sustainability, cooperation and research in the water sector.

Program
